

## CHDP Vision Screening Pre/Post-Test Answer Key

---

1. Visual acuity screening starts at what age?
  - a. At birth
  - b. 2 years
  - c. 3 years**
  - d. 5 years
  
2. Which of the following are NOT requirements for conducting visual acuity screening?
  - a. A well-lit room
  - b. Absence of visual and auditory distractions
  - c. Eye chart should be at child's eye level
  - d. An ophthalmologist**
  
3. Eyes should be screened binocularly (both eyes together).
  - a. True
  - b. False**
  
4. The "Critical line" is
  - a. The top line of the wall chart
  - b. The red line on the flipchart or wall chart
  - c. The age-dependent line on the flipchart or wall chart that a child is expected to see normally and pass**
  - d. None of the above
  
5. The "Threshold line" is
  - a. The top line of the wall chart
  - b. The smallest line the child can pass on the flipchart or wall chart.**
  - c. The age-dependent line on the flipchart or wall chart that a child is expected to see normally and pass
  - d. None of the above
  
6. What is the recommended screening distance for children age 3-5 years?
  - a. 5 feet
  - b. 10 feet**
  - c. 15 feet
  - d. Any distance the screener chooses
  
7. What is the recommended screening distance for children 6 years and older?
  - a. 5 feet
  - b. 10 feet**
  - c. 15 feet
  - d. Any distance the screener chooses

8. Besides adhesive patches, what material is recommended for occlusion?
  - a. Child's hand
  - b. Two-inch wide hypoallergenic paper tape**
  - c. Tissue
  - d. Paper cup
  
9. Instrument-based vision screening measures visual acuity.
  - a. True
  - b. False**
  
10. What is the referral criteria for Visual Acuity Screening for 3 year olds?
  - a. Failure to correctly identify the majority of optotypes on the 10/25 (20/50) line, or worse, in either eye.**
  - b. Failure to correctly identify the majority of optotypes on the 10/20 (20/40) line, or worse, in either eye.
  - c. Failure to correctly identify the majority of optotypes on the 10/15 (20/30 or 20/32) line, or worse, in either eye.
  - d. None of the above
  
11. What is the referral criteria for Visual Acuity Screening for 4 year olds?
  - a. Failure to correctly identify the majority of optotypes on the 10/25 (20/50) line, or worse, in either eye.
  - b. Failure to correctly identify the majority of optotypes on the 10/20 (20/40) line, or worse, in either eye.**
  - c. Failure to correctly identify the majority of optotypes on the 10/15 (20/30 or 20/32) line, or worse, in either eye.
  - d. None of the above
  
12. What is the referral criteria for Visual Acuity Screening for children 5 years and older?
  - a. Failure to correctly identify the majority of optotypes on the 10/25 (20/50) line, or worse, in either eye.
  - b. Failure to correctly identify the majority of optotypes on the 10/20 (20/40) line, or worse, in either eye.
  - c. Failure to correctly identify the majority of optotypes on the 10/15 (20/30 or 20/32) line, or worse, in either eye.**
  - d. None of the above
  
13. How soon can a second attempt be made to screen an uncooperative child?
  - a. The same day
  - b. Later during the same visit
  - c. No later than 6 months
  - d. All of the above**
